

Growth Trends to 2030:

Cooperative Forecasting in the Washington Region

Fall 2007

Local governments in the Washington region have worked cooperatively for many years to develop region-wide and neighborhood level forecasts of employment, population, and households. Through this effort, a consistent set of local and regional forecasts is developed for use in program and facilities planning throughout the region.

The Cooperative Forecasting Program, established in 1975 and administered by the Metropolitan Washington Council of Governments (COG), enables local, regional, and federal agencies to coordinate planning using common assumptions about future growth and development in the region. Each series of forecasts, or a “Round,” provides land use activity forecasts of employment, population, and households by five-year increments. Each round covers a period of 20 to 30 years.

The Cooperative Forecasting process provides data necessary for regional planning activities including analyzing the effects of growth and developing policy responses to regional issues. In addition, the forecasts are used to determine the demand for public facilities including schools, parks, medical facilities, roads, stores, and services.

Process

The Cooperative Forecasts is a multi-stage, “top-down/bottom-up” process undertaken by COG’s Planning Directors Technical Advisory Committee and the Cooperative Forecasting and Data Subcommittee that employs both a regional econometric model and local jurisdictional forecasts. The model projects employment, population, and households for the metropolitan Washington area based on national economic trends and local demographic factors. The model is based on the 1983 definition of the Metropolitan Statistical Area (MSA) that includes the COG member jurisdictions, as well as Calvert, Charles, and Stafford counties.

Membership of the Metropolitan Washington Council of Governments

Concurrently, local jurisdictions develop independent projections of population, households, and employment based on pipeline development, market conditions, planned transportation improvements, and adopted land use plans and zoning, taking into account the preliminary regional projections.

The Cooperative Forecasting and Data Subcommittee, which is comprised of local government planners, economists, and demographers, reviews and reconciles the two sets of projections.

COG Cooperative Forecasting Process

Process (continued)

The model and the local jurisdictional projections must be within three percent of each other for the new set of Cooperative Forecasts to be reconciled.

Once the forecasts are reconciled and approved by the Cooperative Forecasting Subcommittee, they are presented and approved by the following committees at COG: the Planning Directors Technical Advisory Committee; the Metropolitan Development Policy Committee; and ultimately the COG Board of Directors, which is composed of local elected officials from throughout the region.

Recognizing that market conditions and policies may change, the subcommittee also reviews the forecasts annually, and allows local governments to make minor adjustments to reflect these changes. The forecasts may also be adjusted to reflect local governments' assessments of the likely housing and employment impacts due to major new transportation facilities. These updated forecasts are referred to as Round 6.3, Round 6.4a, etc. The forecasts in this report are Round 7.1 as adopted by the COG Board in January 2008.

Coordination

In February 2003, the COG Board of Directors adopted Resolution R8-03 which recommended that, beginning with Round 6.3 and for all subsequent rounds, the Cooperative Forecasts would be approved by the COG Board concurrently with the National Capital Region Transportation Planning Board's (TPB) approval of the results of the annual air quality conformity analysis of the Transportation Improvement Program (TIP) and the Financially-Constrained Long Range Plan (CLRP). The purpose of Resolution R8-03 is to further enhance coordination between regional land use and transportation planning in Metropolitan Washington.

In reviewing the Round 7.0 forecasts in 2005, the Planning Directors Technical Advisory Committee and the Metropolitan Development Policy Committee determined that local plans and zoning in the metropolitan Washington region do not currently provide for the amount of housing necessary for workers to fill the forecasted jobs. Previously, forecasts adopted by the COG Board were based on local plans and zoning capacities as provided for in adopted land use plans. In approving Round 7.0, the COG Board concluded that certain localities will need to re-plan and rezone land to provide sufficient housing to meet employment projections. This assumption is still implicit in the Round 7.1 Forecasts.

The Round 7.1 Forecasts reveal dramatic increases in employment, households, and population by 2030, the end of the forecast period. Under the intermediate scenario, regional employment would total more than 4.2 million jobs by 2030, a 39 percent increase over the 2005 employment base of 3.0 million jobs. Also, under this scenario, households would reach more than 2.5 million, a 35 percent increase. The Round 7.1 Forecasts reflect the recommendations of the 2005 Base Realignment Closure (BRAC) Commission, as of August 2007.

After modest growth in the 1970s and early 1980s, the region's population grew rapidly in the late 1980s. During the 1990s, the region also experienced growth with the population reaching nearly 5.0 million residents in 2005. Regional population is anticipated to increase by 32 percent during the forecast period, reaching nearly 6.6 million in 2030. This will add nearly 1.6 million people to the region by 2030, which is slightly less than the amount of people added during the previous 30-year period.

Employment

Regional employment, projected to increase nearly 39 percent from 2005 to 2030, will experience a slightly higher rate of growth than both population and households.

Two-thirds of All New Jobs in Services (Industry Shares of 2005–2030 Growth)

Employment growth would be the greatest during the 2005 to 2010 time period, when an average of 60,000 new jobs are anticipated per year—slightly more than the amount of jobs added from 2010 to 2015. Two-thirds of all new jobs are anticipated in service industries such as engineering, computer and data processing, business services, and medical research. Job growth in Northern Virginia (61%) will outpace the growth anticipated in the Maryland suburbs (38%), and the District of Columbia (18%).

Source: Round 7.1 Cooperative Forecasts

¹Based on the 1983 definition of the Washington Metropolitan Statistical Area (MSA)

Employment (continued)

Fairfax, Prince George's, and Montgomery counties would add the largest numbers of new jobs to the region's employment base during the 2005 to 2030 forecast period, followed by Loudoun County and the District of Columbia.

Collectively, the region's inner suburbs will add the largest number of new jobs, 605,000, by 2030. However, as with population and household growth, the largest percentage increases in employment will occur in the outer suburbs of Virginia and Maryland. Together, these outer jurisdictions will add 333,900 jobs to the region's base, and will grow their number of jobs 65 percent by 2030.

Despite the tremendous growth in suburban employment shown in the forecasts, the District of Columbia will continue to have the largest number of jobs of any single jurisdiction and would account for a fifth of the region's employment in 2030. Collectively, the central jurisdictions will account for 30 percent of regional employment.

Households

Regional economic growth will continue to attract new residents and fuel a general demand for new housing. Households, or occupied housing units, in turn form the basis for population forecasts for most jurisdictions participating in the Cooperative Forecasting process. Planners monitor housing construction and estimate population growth by multiplying the number of occupied housing units by the average number of people in the jurisdictions' households.

The addition of more than 657,000 households during the 2005 to 2030 forecast period reflects the growth in jobs and in-migration to the region. The largest number of new households will be in Fairfax, Montgomery, and Loudoun counties, and the District of Columbia, which collectively contribute more than half of the household growth during the forecast period.

Loudoun County will grow at a rate of 90 percent, the most rapidly of all jurisdictions, adding 78,400 households to the 2005 base of 87,500 households.

Population

The region's population is expected to grow steadily through the forecast period, adding an average of approximately 64,000 persons a year. Population will be spurred by the long-term strength of the region's economy, high rates of in-migration and international immigration, and declines in average household size less rapid than previously anticipated. The region's population 65 years of age and older will more than double from 2000 to 2030, while the number of children will increase by about 30 percent during the period.

Most of the population growth will be in Fairfax, Loudoun, Montgomery and Prince William counties. However, the outer jurisdictions will experience the fastest rates of growth, led by Loudoun (89 percent), Stafford (79 percent), and Prince William (59 percent) counties. The region's central jurisdictions will grow more slowly. In the City of Alexandria and Arlington County, population will increase by 26 and 22 percent, respectively. The District of Columbia will experience an end of short-term population loss and will grow by 24 percent during the forecast period.

Round 7.1 Households in Activity Clusters by Jurisdiction in 2030

Round 7.1 Percent of Employment Growth Between 2005 and 2030 Occurring in Activity Clusters

Regional Activity Clusters

Regional activity clusters are based on aggregated regional activity centers that were delineated to both simplify the regional activity center map and to describe the related or companion areas within the major transportation corridors. Clusters were created by selecting the Traffic Analysis Zones (TAZ) that are directly adjacent to the activity centers with special consideration given to those TAZs that follow major transportation corridors.

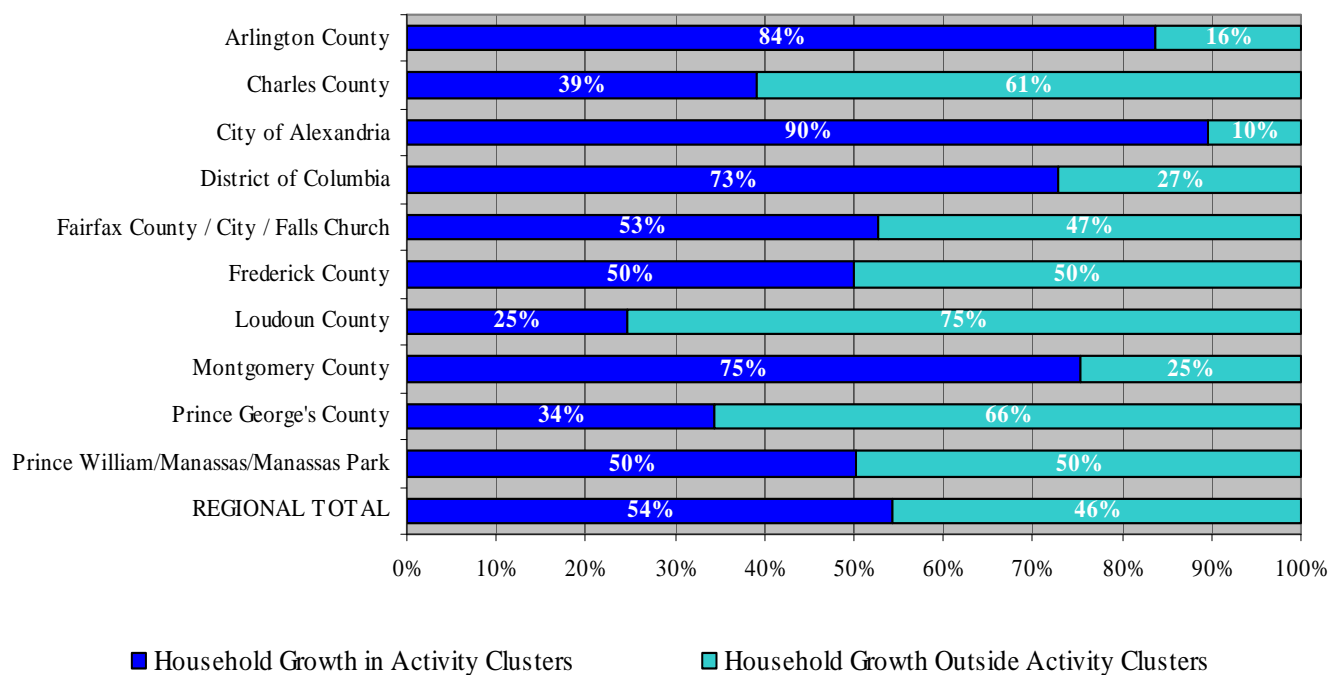

In 2005, 73 percent of the region's jobs were located in regional activity clusters. During the 2005 to 2030 forecast period, 72 percent of job growth will be concen-

trated in activity clusters. The highest percentages of jobs located in regional activity clusters in 2030 will be found in the Central Jurisdictions; the City of Alexandria (91 percent), the District of Columbia (88 percent), and Arlington County (86 percent).

Households in regional activity clusters account for 41 percent of the region's total households in 2005. From 2005 to 2030, 54 percent of the household growth is projected to occur in regional activity clusters. In 2030 the highest percentages of households located in regional activity clusters will be in the Central Jurisdictions; City of Alexandria (85 percent), Arlington County (69 percent), and the District of Columbia (66 percent).

Note: Regional Activity Clusters analysis is based on cluster boundaries derived from the Round 7.0 Regional Activity Centers (April 2007.) For more information on regional activity centers and clusters go to <http://www.mwcog.org/planning/planning/activitycenters/>.

Round 7.1 Percent of Household Growth Between 2005 and 2030 Occurring in Regional Activity Clusters

Jurisdictions Updating Their Forecasts for Round 7.1

The Metropolitan Washington Council of Governments (COG) is the regional organization of the Washington area's major local governments and their governing officials. COG works toward solutions to such regional problems as growth, transportation, inadequate housing, air pollution, water supply, water quality, economic development, and noise, and serves as the regional planning organization for the metropolitan Washington region.

The Cooperative Forecasting "Round 7.0 Technical Report," published by COG, contains more detailed information about the Cooperative Forecasts, including the assumptions and methodologies employed by each jurisdiction. For more information contact the Information Center, Metropolitan Washington Council of Governments, 777 North Capitol Street, N.E. Suite 300, Washington, D.C. 20002-4226; (202) 962-3256.
