

**AIR QUALITY CONFORMITY ASSESSMENT:  
2013 CONSTRAINED LONG RANGE PLAN AND THE FY2013-2018 TRANSPORTATION  
IMPROVEMENT PROGRAM**

**SCOPE OF WORK**

**I. INTRODUCTION**

Projects solicited for the 2013 Constrained Long Range Plan (CLRP) and FY2013-2018 Transportation Improvement Program (TIP) are scheduled to be finalized at the February 20, 2013 TPB meeting. This scope of work reflects the tasks and schedule designed for the air quality conformity assessment leading to adoption of the plan on July 17, 2013. This work effort addresses requirements associated with attainment of the ozone standards (volatile organic compounds (VOC) and nitrogen oxides (NO<sub>x</sub>) as ozone precursor pollutants), and fine particles (PM<sub>2.5</sub>) standards (direct particles and precursor NO<sub>x</sub>), as well as maintenance of the wintertime carbon monoxide (CO) standard.

The plan must meet air quality conformity regulations: (1) as originally published by the Environmental Protection Agency (EPA) in the November 24, 1993 Federal Register, and (2) as subsequently amended, most recently on March 14, 2012, and (3) as detailed in periodic FHWA / FTA and EPA guidance. These regulations specify both technical criteria and consultation procedures to follow in performing the assessment.

This scope of work provides a context in which to perform the conformity analyses and presents an outline of the work tasks required to address all regulations currently applicable.

**II. REQUIREMENTS AND APPROACH**

**A. Criteria** (See Exhibit 1)

As described in the 1990 Clean Air Act Amendments, conformity is demonstrated if transportation plans and programs:

1. Are consistent with most recent estimates of mobile source emissions,
2. Provide expeditious implementation of TCMs, and
3. Contribute to annual emissions reductions.

Assessment criteria for ozone, CO, and PM<sub>2.5</sub> are discussed below.

Ozone season pollutants will be assessed by comparing the “action” scenarios to the most recently approved 8-hour ozone area VOC and NO<sub>x</sub> mobile emissions budgets. The 2008 Reasonable Further Progress (RFP) budgets were deemed adequate for use in conformity by EPA in September 2009. 2009 attainment and 2010 contingency budgets are expected to be approved by EPA in January 2013. All of these budgets were submitted to EPA by the Metropolitan Washington Air Quality Committee (MWAQC) in 2007 as part of the 8-hour ozone State Implementation Plan (SIP).

The region is in maintenance for mobile source wintertime CO and, as in prior conformity assessments, is required to show that pollutant levels do not exceed the approved budget.

PM<sub>2.5</sub> pollutants will be assessed both by comparing the “action” scenarios to a 2002 base, and by comparing the pollutant levels to the budgets in the proposed PM<sub>2.5</sub> Maintenance Plan. PM<sub>2.5</sub> emissions will be inventoried for yearly totals (instead of on a daily basis as performed for Ozone and CO).

**B. Approach** (See Table 1 – Summary of Technical Approach)

As in the past, this analysis will include use of the Version 2.3 travel demand model with the 3722 TAZ area system. Changes include the use of updated Cooperative Forecasts, Round 8.2, and the use of the MOVES emissions model.

In addition to the elements below, explicit inputs include: a summary list of major policy and technical input assumptions, shown as Attachment A; and all transportation network elements which will be finalized at the February 20, 2013 TPB meeting.
