

PFAS and Biosolids: A Maryland State Perspective

MWCOG PFAS and Biosolids Workshop
October 9, 2025

Zachary Schafer

Assistant Secretary

Maryland Department of the Environment

Policy Action and Success Summary

Federal Action

- EPA Draft Biosolids Risk Assessment (January 2025)
- PFAS Destruction and Disposal Guidance (April 2024)
- CERCLA Hazardous Substance Designation (April 2024)
- NPDES PFAS Pretreatment Guidance (December 2022)

State Action

- PFAS Action Plan (December 2023)
- Wastewater and Biosolids Monitoring (2023, January 2025-present)
- Biosolids Land Application Guidance (August 2024)
- Source Trackdown and Industrial source reduction (Ongoing)
- Deployment of federal funding for PFAS in drinking water and wastewater (2022present)

EPA Draft Biosolids Risk Assessment

- *Draft* published January 2025; public comments closed August 2025
- Standard procedure for potential contaminants in sewage sludge
- Modeled several theoretical scenarios with different application rates, and exposure and uptake pathways (milk, eggs, meat, well contamination, etc.)
- Also modeled risks associated with landfilling, incineration
- Analyzes several factors:
 - **Presence:** how much of a pollutant is present in the environment?
 - Exposure: how much contact a human or wildlife has with the pollutant?
 - O Toxicity: the health effects the pollutant causes in humans or wildlife?

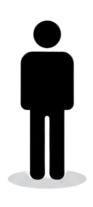

EPA Modeled Scenario:

- How much PFAS: 1 part per billion (ppb)
- How often is it applied: **1 time per year**
- How much is applied: 10 dry metric tons per hectare
- How many years is it applied: 40 years
- How many years of a person's exposure: 10 years
- Assume only one exposure pathway: milk, average consumption
- Isolate to one health effect: cancer risk

1 case 1000 cases

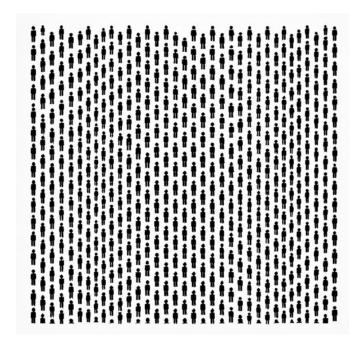

Additional lifetime cases of cancer per million people

Thought exercise scenario:

- How often is it applied: 1 time per year
- How much is applied: 3 dry metric tons per hectare (down from 10)
- How many years is it applied: 10 years (down from 40)
- How many years of a person's exposure: 3 years (down from 10)
- PFAS Concentration: 1 PPB

1000 cases

22.5 cases

Additional lifetime cases of cancer per million people

MD State PFAS Laws

- 2022: George Walter Taylor Act
 - State Action Plan
 - Ban on PFAS Fire Fighting Foam, certain products (carpets, food packaging)
- 2024: Protecting State Waters From PFAS Pollution Act (biosolids monitoring, significant industrial user action levels and mitigation planning)
- 2025: Proposed PFAS limits in biosolids (withdrawn), pesticides (withdrawn)

Maryland PFAS Action Plan

Prepared for: The Maryland General Assembly Annapolis, MD

December 2023

MARYLAND DEPARTMENT OF THE ENVIRONMENT 1800 Washington Boulevard | Baltimore, MD 21230 | mde.maryland.gov 410-537-3314 | 800-633-6101 x3314 | TTY Users: 7-1-1

MARYLAND DEPARTMENT OF HEALTH
201 W. Preston Street | Baltimore, MD 21201 | health.maryland.gov
410-767-6500 | 1-877-463-3464

Wes Moore, Governor | Aruna Miller, Lt. Governor | Serena McIlwain, MDE Secretary | Laura Herrera Scott, MDH Secretary

MD Actions to Reduce PFAS Loading to WWTPs

Industrial Discharge to WWTPs

- Mandatory state monitoring and investigation
- PFAS action levels for significant industrial users
- Mitigation plan development through pretreatment control program

Infiltration (contaminated sites, air emissions, industrial discharge and stormwater)

- Source trackdown investigations
- Industrial Discharge General Permit conditions (stormwater pollution prevention plans)
- Statewide surface-water PFAS survey
- Air permit conditions (early stage)
- Fire fighting foam takeback program

Landfill Leachate

- Monitoring requirements in refuse disposal permits at 91 facilities
- Data just starting to come in late 2025
- Exploring assessment and cleanup standards
- Possible federal limits still years away

Consumer Products

- PFAS in carpets, food packaging (early implementation)
- PFAS pesticide bill (2025) proposed, withdrawn
- PFAS product phase-out bill (anticipated 2026)

Biosolids Actions

- Monitoring of facilities that have their biosolids land applied (~35 Class B facilities)
- Out-of-state facilities required to submit PFAS data
- MDE Biosolids Land Application Guidance (August 2024)
 - 3 Tiers of concentration levels and adjusted application rates (Michigan approach)
- Monitoring requirement for all facilities generating biosolids for land application
- Deploying funding to pilot treatment and destruction

Key Takeaways

- MD's approach and direction is NOT an attempt to ban land application
- MDE and utilities are essential partners
- Collaborative risk mitigation planning will be key
- Significant work already underway to identify sources and reduce PFAS loading
- A backstop limit for high levels in biosolids is important...
- ...but the long-term solution must be stronger upstream source control.
- Funding and flexibility to pilot innovative solutions is essential
- State leadership is driving progress...
- ...but there is no substitute for federal leadership.
- PFOA and PFOS are where we are now, but they are not the end of the story.

Thank you

Zachary Schafer

Assistant Secretary zachary.schafer@maryland.gov
