# The Process: Invasive Species

Incised Fumewort  
*Corydalis incisa*

## The Process: Observers

# The Process: Project Page

- 135 species
- >37,000 observations
- >9,000 citizen scientists
- 2,000 curators

The screenshot shows the iNaturalist project page for 'Invader Detectives: National Capital Region'. The header includes the iNaturalist logo, a search bar, and navigation links: Explore, Your Observations, Community, Identify, and More. On the right, there are links for Upload, 83 messages, 324 comments, and a user profile icon. The main banner features the 'INVADER DETECTIVES' logo with a magnifying glass over a beetle and a silhouette of a detective. Below the logo is the tagline 'FIND IT. REPORT IT. GET IT. GONE.' and the project name 'Invader Detectives: National Capital Region'. To the right of the banner is an 'About' section with a 'Leave' button and 124 members. The text describes the project's purpose: to track reports of introduced species that are beginning to spread through natural areas. It mentions that information collected is curated into 'daughter pages' which only contain curated Research Grade reports. Below the 'About' section are links for 'Read More', 'Your Membership', 'Edit Project', and 'Project Journal'. Below the banner is a 'Map of Observations' section showing a map of the National Capital Region with orange squares indicating observation locations. The map includes labels for various cities and towns, as well as the Monongahela National Forest. At the bottom of the map section is a 'Recent Observations' carousel showing six small images of different plant species.

# How You Can Help

- A. Get iNaturalist app
- B. Look for ED/RR species (like trapa)
- C. Record your observations

# Join the listserv

## Species info

- seasonally appropriate
- distinguishing characteristics

## Conversation

- thoughts, questions, observations

## Events
